ALOT HOUSE

The house, designed in three modules, allows for variety within a recognizable form. The unit works as infill or in series on adjoining lots. The design is readily adaptable for various site conditions, neighborhood patterns, lifestyle choices, tastes and budgets based on standard building materials and technologies. The house is organized around a central circulation/mechanical core. An open stair links ground level "public" to "private" spaces above. A variety of open areas, walkways and patios extend the living space into the public realm, re-connecting residents to their community and animating the streetscape, while providing a layer of security and privacy.
